

Pilot-Driven Method Selection (Data Decides)

**Pilot diagnosis:
per-component forgetting profile**

H_a : fusion forgets most

H_b : uniform, 2-D position drifts fastest

H_c : scenario / modality-dependent

H_0 : no group separates after Bonferroni

**Candidate A
LAPP + H-LoRA**

**Candidate B
Layout-Protected EWC**

**Candidate C
Modality-Routed Prompts**

**Characterisation-only
(fallback)**

The remedy is selected from the diagnosis, not pre-committed — method choice emerges from pilot findings at Week 4.
